EMITE Ing's R&D Director receives Vodafone Award

EMITE Ing is proud to announce **the Vodafone Foundation-COIT Award for the PhD thesis of Juan F. Valenzuela-Valdés, R&D Director at EMITE Ing.**

The award, granted to the best PhD thesis on Advanced Mobile Communications, was gained after a rigorous and competitive selection of candidates and peer-review process all over Spain.

The award confirms once more the versatility and technical capabilities of the technology being developed by EMITE Ing at international level.

“This award certifies that technology transfer and innovation can be possible in Spain with results that do not have anything to envy to any other country. **I am sure this award will add a distinction category to our products worldwide**”, Dr. Juan F. Valenzuela-Valdés commented, R&D Director of EMITE Ing.

Industrial property is granted by 2 patents of the novel technique, recently extended to the EU by PCT, and by exclusive exploitation rights over two more previous patents. EMITE is seriously considering the extension of the patents to the rest of the world, particularly Asia and the USA, wherein distribution agreements have been signed.
