Anritsu and EMITE announce HTTP Adaptive Streaming (HAS) solution.

For immediate release – Anritsu and EMITE are proud to announce their latest combined solution for testing video streaming performance on IEEE 802.11ac standard. Anritsu's Wireless Connectivity Test Set MT8862A, has been successfully integrated in combination to the EMITE E600 and I60 Reverberation Chambers to perform HTTP Adaptive Streaming (HAS) performance testing.

This new solution provides a powerful tool for video streaming service providers to test the performance of video streaming protocols in a realistic conducted or Over-The-Air environment, allowing the capability to optimize the video streaming efficiency and quality in reduced data throughput scenarios or optimizing bandwidth requirements for high quality video signals. In the forthcoming generation of mobile communications bandwidth optimization will be of uttermost importance due to the increasing demand of data and video services, this solution will help service providers to analyse in detail the data transmission quality and to analyse possible improvements in the actual streaming protocols.

Being able to test the WLAN standards and video streaming protocols keep EMITE and Anritsu in the edge of technology for helping customers and service providers deliver their on-demand services solutions to the market with total confidence in the performance.

"We are proud once again to develop a world's first capability for HTTP Adaptive Streaming with the aid of Anritsu's unique Wireless Connectivity Test Set MT8862A WLAN and our E600 and I60 Reverberation Chamber WLAN. We are already in contact with some of the most important companies worldwide that has shown interest on this solution for their TI efficiency saving costs in advance of any investment", said David Sánchez, CEO of EMITE.

"This video streaming base performance test is a new challenge which can be verified the WLAN OTA performance from different angle, and will be important in the future in order to secure the brand position with high-quality WLAN product. We are also proud to release this test solution collaborated with EMITE's leading-edge chamber products to the world-wide market.", said Hideo Zuinen, Product Manager, IoT Test Solutions Div., Anritsu Corporation.

About Anritsu

Anritsu Corporation (www.anritsu.com) is a provider of innovative communications solutions for more than 120 years. The company's test and measurement solutions include wireless, optical, microwave/RF and digital instruments, operations support systems and solutions, customized software solutions, that can be used during R&D, manufacturing, installation, and maintenance. Anritsu also provides precision microwave/RF components, optical devices, and high-speed devices for design into communication products and systems. With the addition of multidimensional service assurance solutions for network monitoring and optimization, Anritsu provides complete solutions for existing and next-generation wireline and wireless communication systems and service providers. Anritsu sells in over 90 countries worldwide with approximately 4,000 employees. For more information, visit www.anritsu.com

About EMITE

EMITE Ingeniería, S.L. is designs, develops, manufactures and commercializes OTA Test Systems for performance, compliance and pre-compliance testing of any cellular and wireless standards and pre-standards worldwide, including 5G, LTE-A and WiFi (up to 6E). Headquartered at the Fuente Álamo High Tech Park in the Region of Murcia (Spain) and with distributors in 25 countries, test show rooms in America, Asia and Europe, and both national and international awards, EMITE OTA Test Systems are being used worldwide by carriers, OEMs, test labs, regulatory authorities and many others around the wireless ecosystem. With a customer-driven roadmap and a vision of changing the way technology gets through our life, EMITE OTA Test Systems are more than just chambers, bringing OTA testing into a new era of capabilities and easiness. www.emite-ing.com
